---	--	---

IZOLPLAST AB adhesives are intended for anti-corrosion protection and stabilization of screw connections. Two-component adhesive in tubes with a total weight of 200g.

Intended use and special conditions of use:

- Thoroughly clean and degrease the bolt intended for stabilization.
- Prepare the required portion of glue by squeezing from the A tube and the B tube equal amounts of the individual ingredients and mix in the ratio 1: 1.
- Lubricate the resulting mixture with the connecting threads of the bolts and twist.
- Leave to stabilize for 2 hours - at ambient temperature, about 20oC.
- Screws stabilized with IZOLPLAST AB glue can be unscrewed after heating to a temperature of approx. 90 ° C, for example with an acetylene torch, or by using a wrench with an appropriate arm.
